Windows Subsystem for Linux

The image displays three overlapping terminal windows running Linux distributions on a Windows host. The top window shows the Ubuntu 16.04 xential environment with system information: OS: Ubuntu 16.04 xential, Kernel: x86_64 Linux 4.4.0-43-Microsoft, Shell: sudo screenfetch, CPU: Intel Core i7-6650U CPU @ 2.208GHz, and RAM: 7633MiB / 16310MiB. The middle window shows the openSUSE environment with system information: OS: openSUSE, Kernel: x86_64 Linux 4.4.0-43-Microsoft, Uptime: 0m, Packages: 0, Shell: sudo screenfetch, CPU: Intel Core i7-6650U CPU @ 2.208GHz, and RAM: 6850MiB / 16310MiB. The bottom window shows the Fedora environment with system information: OS: Fedora, Kernel: x86_64 Linux 4.4.0-43-Microsoft, Uptime: 0m, Packages: 0, Shell: sudo screenfetch, CPU: Intel Core i7-6650U CPU @ 2.208GHz, and RAM: 6835MiB / 16310MiB. The Windows taskbar is visible at the bottom, and the system tray shows the date and time as 10:46 5/8/2017. A small Windows logo is visible in the background on the right side.

```
rich@RichTurn01: ~$ sudo screenfetch
root@RichTurn01: ~#
OS: Ubuntu 16.04 xential
Kernel: x86_64 Linux 4.4.0-43-Microsoft
Shell: sudo screenfetch
CPU: Intel Core i7-6650U CPU @ 2.208GHz
RAM: 7633MiB / 16310MiB

rich@RichTurn01: ~$ sudo screenfetch
root@RichTurn01: ~#
OS: openSUSE
Kernel: x86_64 Linux 4.4.0-43-Microsoft
Uptime: 0m
Packages: 0
Shell: sudo screenfetch
CPU: Intel Core i7-6650U CPU @ 2.208GHz
RAM: 6850MiB / 16310MiB

rich@RichTurn01: ~$ sudo screenfetch
root@RichTurn01: ~#
OS: Fedora
Kernel: x86_64 Linux 4.4.0-43-Microsoft
Uptime: 0m
Packages: 0
Shell: sudo screenfetch
CPU: Intel Core i7-6650U CPU @ 2.208GHz
RAM: 6835MiB / 16310MiB

rich@RichTurn01: ~$ clear; cat ~/temp/distros/fedora.txt; cd -/
```

Agenda

- Change of heart
- Orchestration
- **Containers**
- Secure VM
- Accelerated Networking
- Future

Windows

docker

Linux

Linux containers with Hyper-V isolation

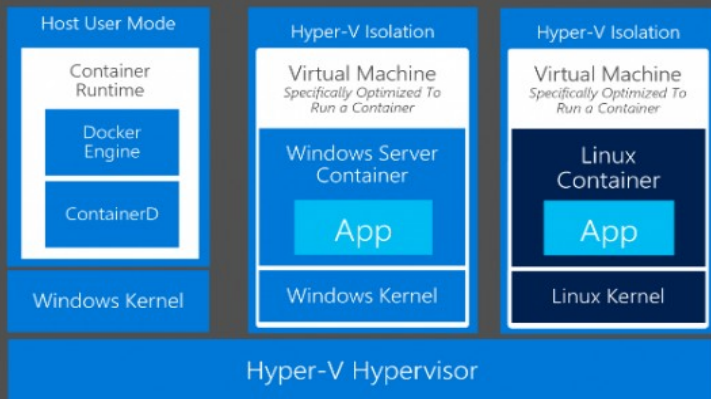

One Docker engine

One container host

Any container,
regardless of OS

Choice of Linux kernels

Yes, this will be on Win10!

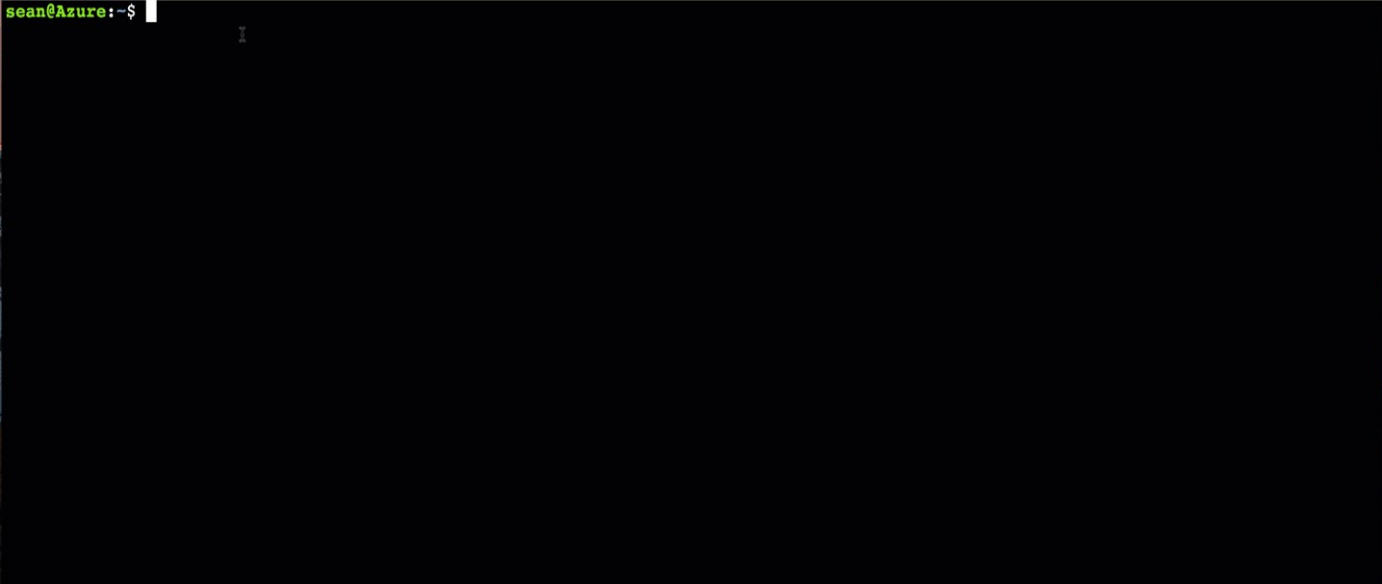

Azure Container Instances - M x Sean

Agenda

- Change of heart
- Orchestration
- Containers
- **Secure VM**
- Accelerated Networking
- Future

What is the problem?

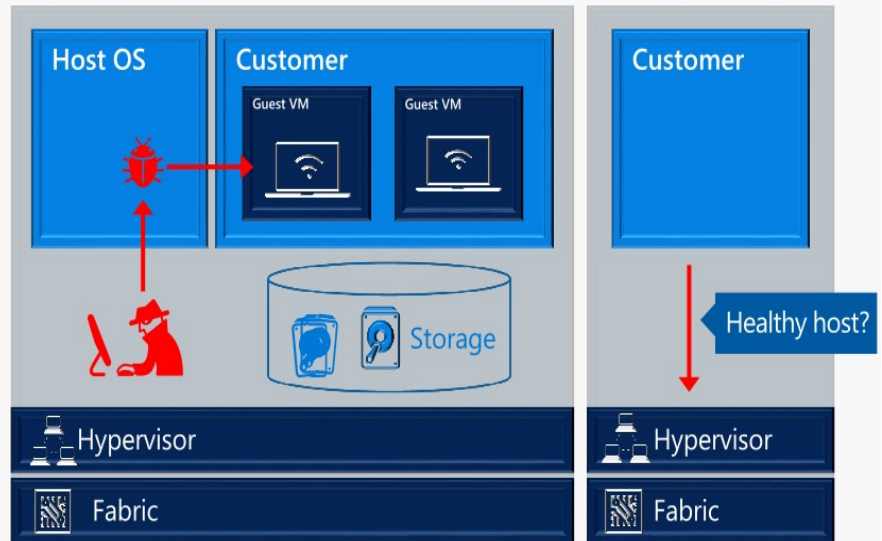

Virtual machines introduce new security risks

Compromised or malicious fabric admins can access guest virtual machines

Health of hosts not taken into account before running VMs

Tenant's VMs are exposed to storage and network attacks

VMs don't benefit from hardware-rooted security such as TPMs

Shielded VMs: Security Assurance Goals

Encryption of data, both at-rest & in-flight

Virtual TPM enables the use of disk encryption within a VM (e.g. dm-crypt, BitLocker)
Both Live Migration and VM state are encrypted

Fabric admins locked out

Host administrators cannot access guest VM secrets (e.g. can't see disks, video, etc.)
Host administrators cannot run arbitrary kernel-mode code

Attestation of host health required

VMs can only run on "healthy" hosts designated by the VM owner

NOTE: Shielding is not intended as a defense against DoS attacks

Drilldown: Normal Boot Path (1 of 3)

Key Goals

Prevent tampering with boot path that could expose secrets

Automate supplying dm-crypt passphrase from the vTPM

Don't modify the code in the normal Linux boot path (shim, grub, kernel)

What is modified

- initramfs updated to get dm-crypt passphrase from a file
- lsvmload used as a precursor to the normal Linux boot shim
- lsvmload inject disk passphrases as a file into virtualized copy of initramfs

What is not modified

- Linux shim
- grub
- Linux kernel

Current Status

Hyper-V is updated to enable Linux Shielded VMs

Updated Hyper-V release ships later this fall

Works with Linux distros that can UEFI Secure Boot

We're collaborating with commercial distro vendors to ensure official support

Red Hat, SUSE, and Canonical

Windows Shielded VMs commercially available today

Rackspace, brightsolid (UK)

Expect to see Linux Shielded VMs commercially available after Hyper-V update ships

Agenda

- Change of heart
- Orchestration
- Containers
- Secure VM
